SUMMARY

- Software Engineering student (Dean's List) with experience in full-stack development and software architecture.
- Skilled in C#, .NET, React, and Node.js for developing scalable web applications and robust backend systems.
- Experienced technical leader with a proven track record of managing agile development teams and conducting code reviews.
- Highly motivated self-learner with a strong foundation in web security and system design, driven to build impactful engineering solutions.

EDUCATION

Braude College

Software Engineering B.Sc. (2022 – Present) Current
GPA: 88.51

✓ Dean's List recognized for academic excellence

Relevant Coursework

- Artificial Intelligence & Machine Learning
- Information Security & Cryptology
- Software Systems Architecture
- Data Structures & Algorithms
- Advanced Web Technologies
- Compilation Theory
- Operating Systems
- Cloud Computing
- Database Systems
- DevOps

SKILLS

- **Languages:** C, C++, C#, Java, JavaScript, TypeScript, Python, SQL, HTML/CSS.
- **Full Stack:** React.js, Node.js, Express, Redux, Firebase, Tailwind CSS, SQL, NoSQL, LINQ, .NET.
- **Low Level & Systems:** Linux (User/Kernel space), Windows API, Multithreading, OOP, Design Patterns.
- **Tools:** Git, Docker, Unity, VS Code, Visual Studio.

MILITARY

Squad Commander (Sergeant)

Combat Intelligence Collection Corps, IDF
2019 – 2022

- Commanded a squad of 6 soldiers in a C4I (Communications & IT) operational environment.
- Responsible for maintaining critical communication systems under pressure.
- Developed leadership, teamwork, and crisis management skills.

PROFESSIONAL EXPERIENCE

Technical Mentor & Project Lead

Magshimim Program (National Cyber Education)
2025 – 2026

- Mentoring and leading high-school seniors in developing advanced software capstone projects.
- Managing 5 different teams simultaneously, conducting code reviews, and guiding decisions.
- Overseeing Low-Level and Security projects including: **IDPS**, **TorChat**, **Honeypot**, **OS**, and **Parsers**.
- Simulating real-world development lifecycles (Agile), focusing on debugging system issues and optimization.

TECHNICAL PROJECTS

UML Diagram Generator (Full Stack & Compiler Theory)

- Developed a SPA that converts plain text into UML Class Diagrams using React, Node.js, and Firebase.
- Engineered a custom Compiler from scratch to interpret natural language syntax into diagram.
- Implemented the visual rendering engine using ReactFlow and styled with Tailwind CSS.
- Collaborated with a team of 6 developers, utilizing Git for version control and CI/CD pipelines.

Barbershop Appointment & Management System

- Developed a responsive web application and an elegant landing page for a barbershop using React.
- Built a secure backend using Node.js and Firebase, implementing JWT for secure user authentication, registration, and role-based access control.
- Created an interactive admin dashboard to efficiently manage user accounts, schedules, and appointment bookings.

Library Management System (Java & SQL)

- Designed a robust desktop application using Java and JavaFX, implementing OOP principles.
- Architected a relational SQL database schema to manage user roles, inventory, and transaction history.
- Implemented Role-Based Access Control (RBAC) to differentiate between admin and user privileges.

VR Language Learning Game (Unity & AI)

- Developing an Open-World Virtual Reality game for language acquisition using Unity (C#).
- Integrating Speech-to-Text AI models to analyze user pronunciation in real-time and provide feedback.
- Designing immersive game mechanics to facilitate interactive learning in a 3D environment.
